UVU DASHBOARD
Documentation for the Java Program/Database and Excel Files

This documentation is fairly straight-forward, not much is needed to be done.

Step 1: Export the Real Estate reports each to its own excel file (.xlsx)
Step 2: Put the excel files into the designated folder
Step 3: In Each Excel Sheet navigate to the Balance Sheet tab and in Cell A1 (top left) put the name of the real estate you want to associate with that excel document.
Step 4: Run the process.bat program.
Step 5: You are done.

The setup of this app and the database is trying to be as automated as much as possible. With these few steps you are able to update the database when you need to and get the most up to date data for the application.

Note: The files have to be in the correct folder and the excel documents have to be in the same format as always, change either of these will require that the code needs to be changed as well.
